PMP3700

Test sensors for aerospace

The amplified PMP3700 pressure sensors have been specifically designed to meet the harsh test requirements encountered in aerospace applications. These sensors are based on the pedigree of the 3000 series flight qualified product family, which has been hugely successful since its launch in 2000. The PMP3700 sensors offer a high performance (digitally characterised) sensor that can be configured to suit the customer’s specific requirement. The products incorporate the unique Druck fabricated silicon, which is produced in our new 21st century Class 100 clean room, providing unrivalled long term stability and performance. The product is designed with aerospace in mind, offering a fully hermetically sealed device, with EMI and RFI protection.

Features

- Absolute, gauge and sealed gauge options available
- Standard accuracy of ±0.2% FS over the specified temperature and pressure ranges
- Stated accuracy includes the combined effects of non-linearity, hysteresis, repeatability (NLHR) and zero/span settings over the calibrated temperature range
- Fully welded stainless steel construction
- Hermetically sealed

Applications

- Accurate pressure measurements for use in aerospace ground and flight tests
- Suitable for automotive test and many industrial applications
