

Reasons to believe

- At a recent Customer Advisory Board event, a major global company related that it took just a few hours for successful Bently Nevada vibration monitoring system commissioning. Commissioning of a similar machine with a non-BN system took a week.
- A major Middle East customer suffered a two-day delay after substituting another vendor's eddy current drivers.
- An unacceptable number of machine trips (more than 10) were the result of false trips from (non-Bently Nevada) substitutes.

Proximator Systems

You asked,
we're delivering...

Economics

- Reduced or avoided outage time
- Fewer unique part numbers to stock meaning less inventory cost
- Unnecessary calibration eliminated when Proximator system components are changed
- Machine case remains closed for probe replacement between outages
- Longer probe lifetimes, usually more than the time between scheduled machine outages

BHCS32818A (12/2019)

-  Better responsiveness and reduced lead times
-  Lower expediting and processing fees
-  Longer product life
-  And it's all made in the USA

The Bently Nevada product line:

An industry leader in innovation and technology with a commitment to zero emissions.

No surprises

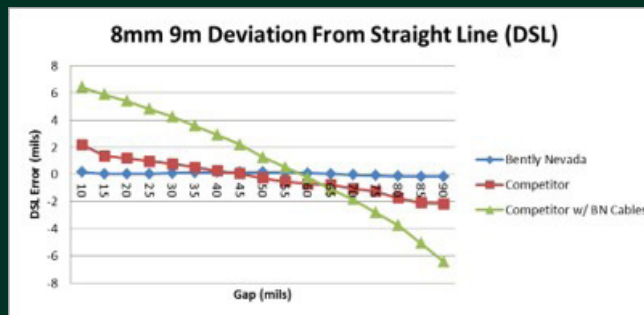

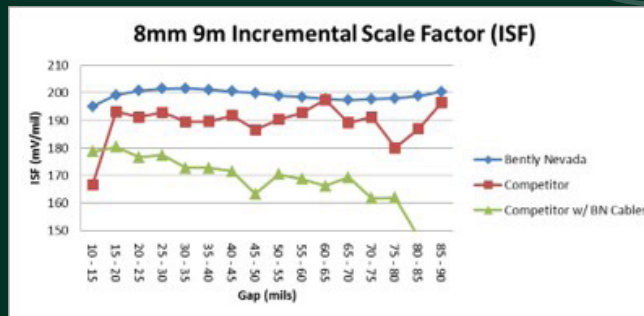

- No false trips
- No missed trips
- No unplanned shutdowns
- No machine catastrophes
- Avoid expensive, unnecessary machine teardowns
- Parts are interchangeable and available
- No re-calibration required when changing system components

Confidence

- Interchangeable components help ensure there are no subtle scale factor changes that introduce false trips and unplanned shutdowns—or result in a catastrophic machine event.
- Extremely precise manufacturing and test standards mean Proximator system components can be mixed and matched while delivering out-of-the-box performance.
- Experienced Bently Nevada field service engineer is in your region and ready to quickly meet your needs.

Machine availability

- Bently Nevada's reliable proximity probes can remain in the machine for decades.
- Cables and Proximitors can be replaced without disturbing the machine case while maintaining calibration.
- Proximity system component interchangeability is the result of extensive engineering and manufacturing standards.
