

Advanced Inspection Services for the Nuclear Industry

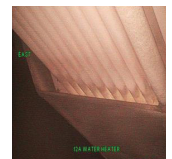

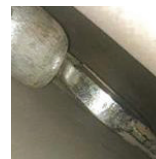

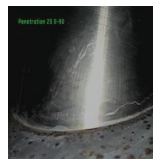

Nuclear power generation facilities are constantly challenged to improve ALARA and FOSAR programs. With over 30 years of experience and the largest inventory of contaminated equipment in the world, Waygate Technologies is here to help. By using remote visual examination to monitor and inspect plant assets, we can significantly reduce or eliminate personnel exposure to high radiation areas.

Inspection applications:

- Bare metal head examinations
- Diesel generators
- Turbine / generator inspections
- Valves
- FME / FOSAR
- Spent fuel dry cask inspections
- Condensers
- Heat exchangers
- Isolated phase bus ducts
- Feed water piping
- Suction strainers
- Expansion bellows
- Pressurizers
- IWE/IWL

Certifications and capabilities:

- ASNT- TCIA VT Level II
- CP189, N-GET Training
