

# Mentor Visual iQ VideoProbe™

The latest generation, built for efficiency.

## Highlights

- Industry-leading video borescope
- The only gesture-based touchscreen
- Real3D™ Measurement with fully surfaced point cloud
- 200% brighter than previous model
- 58% brighter than leading competitor
- 30% improved viewing angle
- More than 200% the measurement working range than previous model
- Windows 10-enabled
- InspectionWorks Connect (local) functionality

## Best-in-class for even better inspections

Improve your inspections and meet increasing standards with the latest release of the industry's first portable borescope with Real3D™ Measurement and analysis capabilities.

Mentor Visual iQ is pushing the boundaries of inspection for more efficient detection. With a one-of-a-kind gesture-based touchscreen, inspections are more intuitive than ever. And paired with an integrated LCD screen for better viewing angles and the best brightness on the market, this device makes your inspections even easier.

A long-range probe doubles the useful scan area for faster, more accurate measurements of larger features. Enhanced processing power allows you to more efficiently handle multiple tasks, and new hardware and software make for seamless connections to external monitors.

The latest upgrade also includes Windows 10, which not only enables iView remote capabilities for streaming and full remote control, but prepares the platform for future growth, as well.

## Improved detection for confident decisions

Mentor Visual iQ is the only video borescope that uses the processing power of Real3D™ Measurement to help you map, measure, and analyze indications in a visualized fully surfaced Point Cloud—enhancing your Probability of Detection (POD) on even the most challenging surfaces. Each feature works together to deliver the most efficient and accurate inspections possible, so you can make the most confident decisions.
