

PanaFlow gas meter system

Panametrics ultrasonic flow meters for gas

The PanaFlow gas meter system is a complete ultrasonic flow meter offering for gas applications with a unique combination of accuracy, rangeability, and reliability in a robust meter design.

The PanaFlow gas meter system consists of two models—the one-path PanaFlow Z1G and the two-path PanaFlow Z2G. Both meters offer a high-performance, yet affordable solution for a variety of gas flow applications.

Applications

PanaFlow gas flow meters can be used in applications such as:

- Biogas
- Natural gas production
- Vent gas
- Waste gas
- Shale gas
- Coal-seam gas wellhead
- Vapor recovery
- Fuel gas

Features and benefits

No drifting, no periodic calibration required		No loss of process control, no downtime, no expense from calibration, and optimization of assets
No pressure drop		No wasted energy from running a pump or need to purchase a larger size pump
No restriction in the pipe		Contamination will not affect meter's measurement (drifting) or cause any damage to meter
No filters or strainers		No maintenance cost
Bi-directional measurement		No additional meters required
No moving parts		No loss of process control, no downtime, no expense from calibration, and optimization of assets
Explosion-proof transducer design		More power to transducers at higher voltages, less risk of attenuation in fluid
Full ultrasonic product line		Meets more needs with full product portfolio; one manufacturer for ultrasonic flow meters

Reliable flow measurement that is easy on your budget

The PanaFlow gas portfolio represents a new generation of Panametrics ultrasonic flow meters. Offered in one-path or two-path wetted versions, PanaFlow gas meters bring together Panametrics ultrasonic expertise with the benefits of ultrasonic technology for affordable, high performance flow measurement.

Unlike other flow measurement technologies, the PanaFlow meters do not require maintenance since they do not have any obstruction in the flow path to clog the process line or moving parts to be damaged by flowing gas. They provide years of trouble-free operation with no adjustments, tuning or corrections. PanaFlow gas meters provide a lower overall total cost of ownership, superb reliability, and excellent performance.

Designed for high impurity gas measurements

Each PanaFlow gas meter is a complete ultrasonic flow metering system specifically designed for the measurement of gases with high levels of impurities. Engineered to the highest levels of reliability and dependability, it is designed with an all-cast meter body and high-accuracy machined surfaces. It has no welds to adversely impact flow dynamics, making possible high accuracy flow measurements, even at low flow conditions.

Local or remote electronics

PanaFlow gas meters are offered with local or remote electronics that are factory-installed on the meter body or electronics that can be installed remotely from the meter body. It is not recommended to locally mount the electronics in applications above 185°F (85°C). PanaFlow gas meters have robust electronics functionality to meet your application needs.

Electronics ordered with a PanaFlow gas meter system are programmed with setup information based on your application, so the system is ready to use as soon as the meter body is installed. When local electronics are integrated with the system, the transducer wiring is already complete, further simplifying the field installation. When remote electronics are used, transducer cabling must be run between the flow meter system and the flow meter electronics.

Transit-time flow measurement

In this method, two transducers serve as both ultrasonic signal generators and receivers. They are in acoustic communication with each other, meaning the second transducer can receive ultrasonic signals transmitted by the first transducer and vice versa. In operation, each transducer functions as a transmitter, generating a certain number of acoustic pulses, and then as a receiver for an identical number of pulses. The time interval between transmission and reception of the ultrasonic signals is measured in both directions. When the gas in the pipe is not flowing, the transit-time downstream equals the transit-time upstream. However, when the gas is flowing, the transit-time downstream is less than the transit-time upstream. The difference between the downstream and upstream transit times is proportional to the velocity of the flowing gas, and its sign indicates the direction of flow.

Transit time flow measurement

Proven technology with improved sound isolation

A PanaFlow gas meter system employs similar robust and reliable transducer technology used in thousands of Panametrics flare gas applications around the world. Ultra-high power transducers with enhanced sound isolation are designed for conditions of extreme condensate and impurities, and for continuous operation even under the harshest of process conditions. The unique design ensures the highest field reliability for continuous flow measurements over a wide range of conditions.

High powered T19 transducers

Fast and easy installation

An integrated PanaFlow gas meter system is fast and easy to install as all components are already installed in the meter body. The system is factory assembled and tested so it meets strict quality control standards. A PanaFlow meter body is composed of a length of pipe with flanged ends and transducer ports rated to the application's pressure requirements, so all the user needs to do is bolt the end flanges into place in the process pipeline.

Model	Z1G	Z2G
Number of paths	One Path	Two Path
Flow measurement range (+/-)		
2" (50mm)	0.5 to 200 ft/s (0.15 to 60 m/s)	0.5 to 200 ft/s (0.15 to 60 m/s)
3" (80mm)	0.5 to 200 ft/s (0.15 to 60 m/s)	0.5 to 200 ft/s (0.15 to 60 m/s)
4" (100mm)	0.5 to 200 ft/s (0.15 to 60 m/s)	0.5 to 200 ft/s (0.15 to 60 m/s)
6" (150mm)	0.5 to 200 ft/s (0.15 to 60 m/s)	0.5 to 200 ft/s (0.15 to 60 m/s)
8" (200mm)	0.5 to 200 ft/s (0.15 to 60 m/s)	0.5 to 200 ft/s (0.15 to 60 m/s)
10" (250mm)	0.5 to 170 ft/s (0.15 to 51 m/s)	0.5 to 180 ft/s (0.15 to 54 m/s)
12" (300 mm)	0.5 to 130 ft/s (0.15 to 39 m/s)	0.5 to 150 ft/s (0.15 to 45 m/s)
14" (350mm)	0.5 to 100 ft/s (0.15 to 30 m/s)	0.5 to 130 ft/s (0.15 to 39 m/s)
16" (400mm)	0.5 to 80 ft/s (0.15 to 24 m/s)	0.5 to 100 ft/s (0.15 to 30 m/s)
Meter accuracy and sensitivity - see accuracy notes below		
Flow velocity accuracy from 5 ft/s (1.5 m/s) to Qmax - note 1		
2" (50mm) to 16" (400mm)	+/-1.5%	+/-1%
Flow velocity sensitivity from 0.5 ft/s to 5 ft/s (0.15 to 1.5 m/s) - note 1		
2" (50mm) to 16" (400mm)	+/- 0.075 ft/s (+/- 0.02 m/s)	+/- 0.05 ft/s (+/- 0.015 m/s)
Repeatability - notes 1 and 2		
2" (50mm) to 16" (400mm)	0.5% of reading	

Note 1:

Accuracy/repeatability specifications assume a final installation with fully developed flow profile (typically 20 diameters upstream and 10 diameters downstream of straight pipe run), Reynolds Number > 5000 and single phase fluids. Applications with piping arrangements that induce swirl (e.g., two out-of-plane elbows) may require additional straight run and/or flow conditioning. For shorter straight pipe runs, consult the factory for a computational flow dynamic evaluation.

Operation and performance

Fluid types

Acoustically conductive gases

Flow measurement

Correlation transit-time

Meter body materials

Low temperature carbon steel, SA352 Gr. LCC Stainless steel, SA351 Gr. CF8M Duplex stainless steel, SA995 Gr. CD3MWCuN

Flange ratings

ASME: 150 lb, 300 lb or 600 lb
DIN: PN10, PN16, PN25; PN40 or PN63

Meter body certifications

PED Cat III, Module B+C2
CRN (All Canadian Provinces)
NACE MR01-75/MR-01-03

Calibration

All meters are air calibrated and supplied with a calibration certificate.

Measurement parameters

Mass flow, standard and actual flow, totalized flow, and flow velocity

Enclosure

NEMA Type 4X explosion-proof and weatherproof (IP66)

- Standard: Epoxy-coated copper-free aluminum
- Optional: Stainless steel

Electronics mounting

Local or remote mounting

Hazardous area certification

US/CAN:

Class I, Division 1, Groups B, C, D; T6...T3C NEMA 4X, IP66, single seal

Class I, Zone 1, AEx db IIB+H2 T6...T3C Gb NEMA 4X, IP66, single seal

ATEX:

II 2 G Ex db IIB+H2 T6...T3 Gb IP66

IECEX:

Ex db IIB+H2 T6...T3 Gb IP66

Other hazardous area certifications are available upon request.

Input power

- Standard: 100 to 240 VAC
- Optional: 12 to 28 VDC, $\pm 5\%$

Cable entries

3/4" NPT

M20 adapters

Display languages

English

Display

Optional: 2 line x 16 character backlit LCD display, configurable to display up to four measurement parameters in sequence

Keypad

Built-in infrared, six-button keypad for full functionality operation

Power consumption

20 W maximum

Process temperature range

-40 to 185 °F (-40 to 85°C) local mount

-40 to 302 °F (-40 to 150°C) remote mount

Ambient temperature range

-40 to 140 °F (-40 to 60°C)

Storage temperature

-40 to +185 °F (-40 to +85°C)

Pressure range

Up to maximum allowable flange operating pressure at temperature per ASME B16.5 or EN1092-1

Inputs/outputs

Standard:

- Two 4-20 mA isolated outputs: 600 Ω maximum load
- Two 4-20 mA inputs: pressure and temperature

Optional:

- Two pulse or frequency outputs: optically isolated, 3 A maximum, 100 VDC maximum, 1 W maximum, from DC to 10 kHz maximum
- Two alarm relays: 120 VAC, 28 VDC maximum, 5 A maximum, DC 30 W maximum, AC 60 VA maximum

Digital communication

- Standard: RS485
- Optional: HART®
- Optional: Modbus®
- Optional: Foundation Fieldbus®

Weight and dimensions

Example dimensions - 3" (80 mm) flowcell (see below)

Flange range	A	C	D	X	Y	Z	CX	CY	CZ	Approx. weight
ASME 150# RF	12.7 (322)	19.0 (481)	7.5 (190)	20.0 (508)	22.7 (576)	9.8 (247)	44.0 (1117)	34.7 (881)	33.8 (857)	66.7 kg
ASME 300# RF	12.7 (322)	19.0 (481)	8.3 (209)	20.0 (508)	23.1 (586)	9.8 (247)	44.0 (1117)	35.1 (890)	33.8 (857)	70.7 kg
ASME 600# RF	12.7 (322)	19.0 (481)	19.0 (209)	20.0 (508)	23.1 (586)	9.8 (247)	44.0 (1117)	35.1 (890)	33.8 (857)	72.9 kg

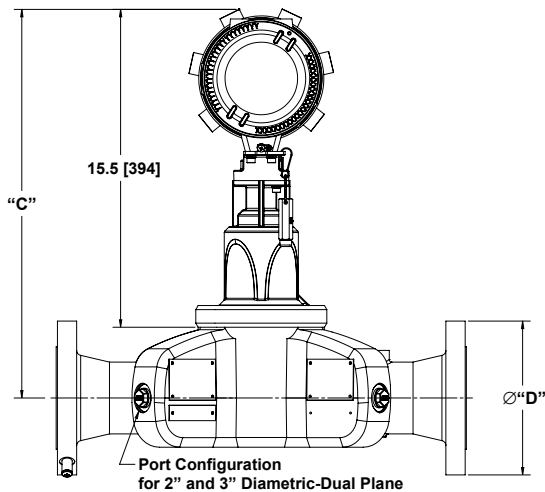

Refer to the table below for weights and dimensions for all line sizes.

Panametrics, a Baker Hughes Business, provides solutions in the toughest applications and environments for moisture, oxygen, liquid and gas flow measurement.

Experts in flare management, Panametrics technology also reduces flare emissions and optimizes performance.

With a reach that extends across the globe, Panametrics' critical measurement solutions and flare emissions management are enabling customers to drive efficiency and achieve carbon reduction targets across critical industries including: Oil & Gas; Energy; Healthcare; Water and Wastewater; Chemical Processing; Food & Beverage and many others.
